

# TankTalk<sup>®</sup>

ANTICIPATE. ACT. PROTECT.

TankTalk<sup>®</sup> brings the future of rainwater storage management forward.

Now you can track rainwater tank levels remotely, in near-real time, and create capacity safely ahead of rain events – all without leaving your desk.

The result? Less pressure on water assets. The potential to reduce stormwater damage. And intelligent flood mitigation.

## Track and anticipate

TankTalk® gives you visibility over storage tank levels through a small, in-tank device that's connected to a OneBox® controller, and coupled with easy-to-use desktop and mobile apps.

Connect to rainfall forecast data and have tanks automatically drain ahead of rainfall events. Or create your own set points for the controlled release of water to build capacity.

## Take action

Armed with the right information, you can choose when to release water and create capacity in individual tanks.

You can change the set points for each tank effortlessly, and even control the release of water manually from your phone or tablet as the tank drains. And rest assured that 5 days' worth of water is always retained in the tank, so end users are never caught short.

TankTalk®'s specialised controllers and valves regulate tank drainage to make it simple and safe.

## Protect your assets, and the environment.

Effortlessly preempt potentially damaging overflows, runoff and flooding.

Create storage capacity remotely, from desktop and mobile apps.

Make better decisions with ongoing rainfall, tank level and drain volume tracking.

An aerial photograph of a suburban development. In the foreground, there's a green lawn and a paved path. In the middle ground, a river flows through the landscape, bordered by lush green trees and vegetation. On the left bank of the river, there's a colorful playground with yellow and green equipment. In the background, a residential neighborhood with houses and more trees is visible under a clear blue sky.

TankTalk® is set to reduce stormwater runoff by 25 per cent at Aquarevo, a sustainable suburban development in Melbourne's south east.

## Protect assets and environments

With TankTalk®, you can balance storage and usage needs, and mitigate the potential for damage to infrastructure, creeks and rivers.

Now you can reduce peak flows in typical rainfall scenarios, and relieve pressure on downstream infrastructure, potentially extending the life of network assets.

You can also mitigate the impacts of runoff and stormwater flooding in local environments, and the potential need for remedial works in the communities you serve.

## The sky's the limit

As rainfall patterns change and extreme weather becomes more common, organisations' ability to control rainwater storage and build capacity becomes increasingly important.

TankTalk® heralds a unique, future-focused approach to rainwater storage. Why wait to optimise this scarce resource safely and intelligently in the communities you serve? TankTalk® makes it possible today.

## Who are we?

Iota is your smart water and wastewater partner.

We're owned by South East Water, an Australian water utility. We develop and commercialise innovations proven within the South East Water network, so the social and economic benefits can be shared with industry.
